

UNIVERSITY OF MUMBAI

Teacher's Reference Manual

Subject: Enterprise Java

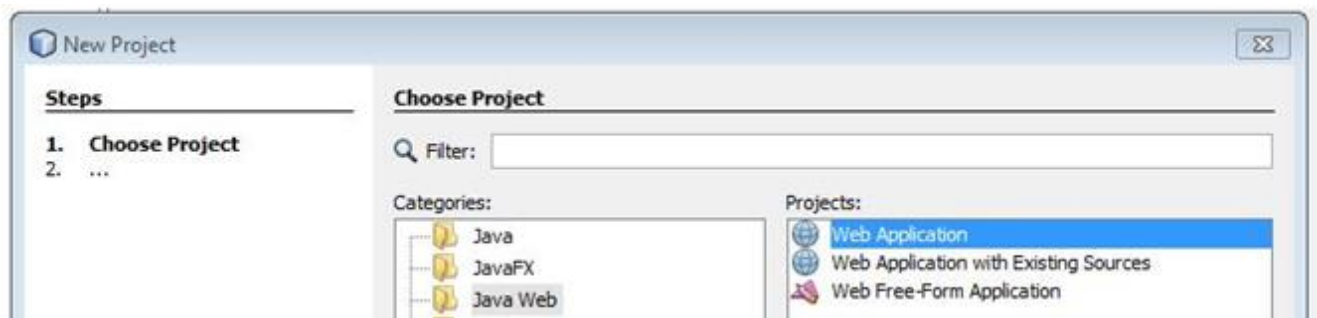

with effect from the academic year

2018 – 2019

Requirements:

1. JDK 8u181
2. Netbeans 8.1 or higher
3. MySql 5.5 or higher

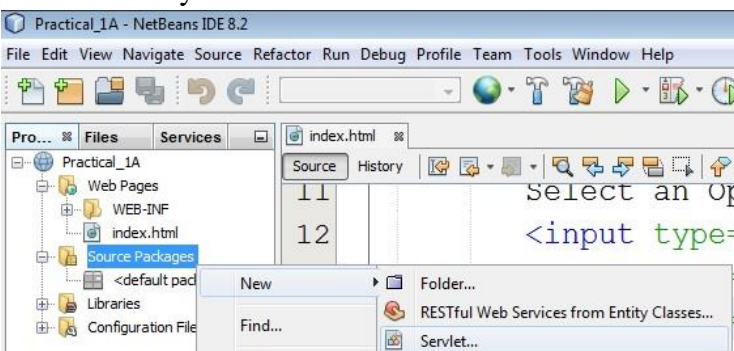

1a. Create a simple calculator application using servlet.

**Create a new project**

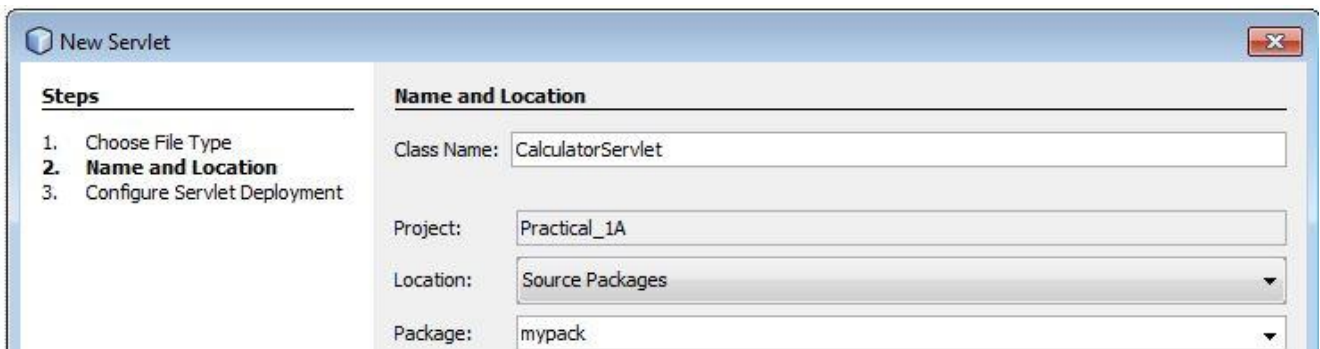

Select java web → web Application

index.html

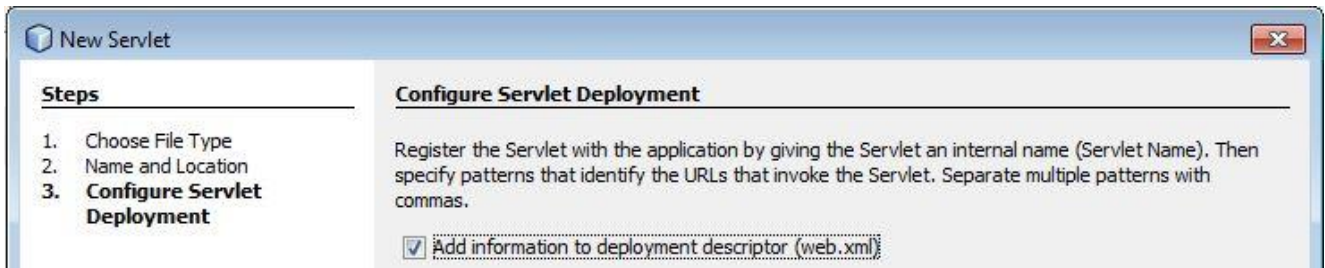

```
<html><head><title>Calculator App</title></head><body>
<form action="CalculatorServlet" >
    Enter First Number    <input type="text" name="txtN1" ><br>
    Enter Second Number   <input type="text" name="txtN2" ><br>
    Select an Operation
    <input type="radio" name="opr" value="+">ADDITION
    <input type="radio" name="opr" value="-">SUBTRACTION
    <input type="radio" name="opr" value="*">MULTIPLY
    <input type="radio" name="opr" value="/">DIVIDE <br>
    <input type="reset">
    <input type="submit" value="Calculate" >
</form></body></html>
```

Add a new Servlet to source package

Name the servlet and package

Check “Add information to deployment descriptor” to add servlet into web.xml
But preferably use annotation.

CalculatorServlet.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
public class CalculatorServlet extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<html><head><title>Servlet CalculatorServlet</title></head><body>");
        double n1 = Double.parseDouble(request.getParameter("txtN1"));
        double n2 = Double.parseDouble(request.getParameter("txtN2"));
        double result = 0;
        String opr=request.getParameter("opr");
        if(opr.equals("+")) result=n1+n2;
        if(opr.equals("-")) result=n1-n2;
        if(opr.equals("*")) result=n1*n2;
        if(opr.equals("/")) result=n1/n2;
        out.println("<h1> Result = "+result);
        out.println("</body></html>");} }
```

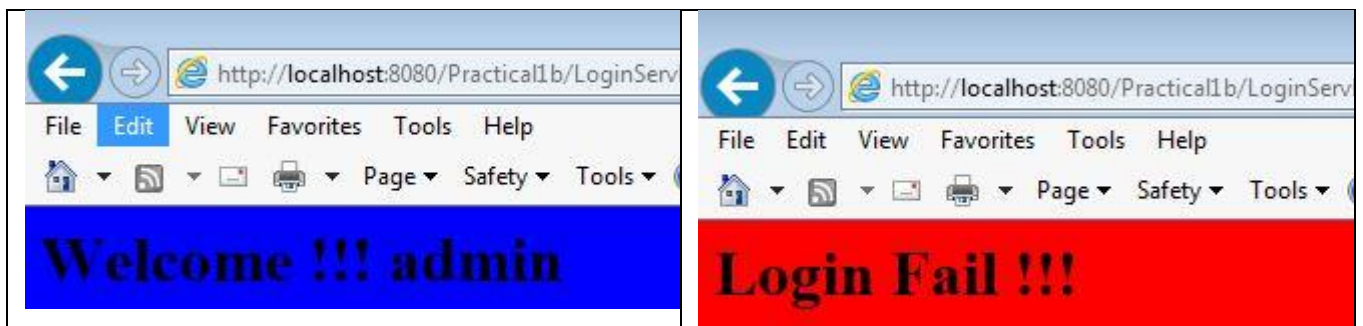

1b. Create a servlet for a login page. If the username and password are correct then it says message "Hello <username>" else a message "login failed"

index.html

```
<html><head><title>Login Form</title></head>
<form action="LoginServlet" >
    Enter User ID<input type="text" name="txtId"><br>
    Enter Password<input type="password" name="txtPass"><br>
<input type="reset"><input type="submit" value=" Click to Login " ></form></html>
```

LoginServlet.java

```
package mypack;
import java.io.*;
import javax.servlet.ServletException;
import javax.servlet.http.*;
public class LoginServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head><title>Servlet LoginServlet</title></head>");
    String uname = request.getParameter("txtId");
    String upass = request.getParameter("txtPass");
    if(uname.equals("admin") && upass.equals("12345")){
        out.println("<body bgcolor=blue >");
        out.println("<h1> Welcome !!! "+uname+"</h1>");
    }
    else{
        out.println("<body bgcolor=red >");out.println("<h1> Login Fail !!! </h1>");
    }
    out.println("</body></html>");}}
```

1c. Create a registration servlet in Java using JDBC. Accept the details such as Username, Password, Email, and Country from the user using HTML Form and store the registration details in the database.

MySql queries

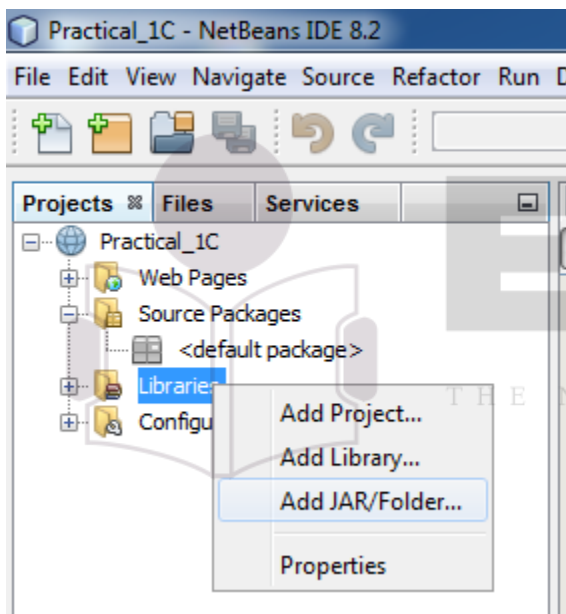

create database LoginDB;

use LoginDB;

create table user(username varchar(20) PRIMARY KEY, password varchar(20), email varchar(20), country varchar(20));

insert into user values ('admin','admin','admin@admin.com','India');

select * from user;

- Add jar file → <<Netbean Folder>>\ide\modules\ext\mysql-connector-java-5.1.23-bin.jar

index.html

```
<html><head><title>Registration Page</title></head>
<body>
<form action="RegisterServlet" >
<H1>Welcome to Registration page</H1>
    Enter User Name    <input type="text" name="txtUid"><br>
    Enter Password     <input type="password" name="txtPass"><br>
    Enter Email        <input type="text" name="txtEmail" ><br>
    Enter Country      <input type="text" name="txtCon" ><br>
<input type="reset" ><input type="submit" value="REGISTER" >
</form>
</body>
```

</html>

RegisterServlet.java

```
package mypack;
import java.io.*;
import java.sql.*;
import javax.servlet.*;
import javax.servlet.http.*;
```

```
public class RegisterServlet extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        String id = request.getParameter("txtUid");
        String ps = request.getParameter("txtPass");
        String em = request.getParameter("txtEmail");
        String co = request.getParameter("txtCon");
        try{
            Class.forName("com.mysql.jdbc.Driver");
            Connection con =DriverManager.getConnection("jdbc:mysql://localhost:3306/logindb");
            PreparedStatement pst = con.prepareStatement("insert into user values(?,?,?,?)");
            pst.setString(1,id);
            pst.setString(2,ps);
            pst.setString(3,em);
            pst.setString(4,co);
            int row = pst.executeUpdate();
            out.println("<h1>"+row+ " Inserted Succesfullyyyyyy");
        }catch(Exception e){out.println(e);}
    }
}
```

| # | username | password | email | country |
|---|----------|----------|-----------------|---------|
| 1 | admin | admin | admin@admin.com | India |
| 2 | Jimmy | abcd | abcd@xyz.com | Japan |

2a. Using Request Dispatcher Interface create a Servlet which will validate the password entered by the user, if the user has entered "Servlet" as password, then he will be forwarded to Welcome Servlet else the user will stay on the index.html page and an error message will be displayed.

index.html

```
<html><head><title>Login Form</title></head>
<form action="LoginServlet" >
    Enter User ID<input type="text" name="txtId"><br>
    Enter Password<input type="password" name="txtPass"><br>
<input type="reset">
<input type="submit" value=" Click to Login " >
</form>
</html>
```

LoginServlet.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.RequestDispatcher;
public class LoginServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head>");
    out.println("<title>Servlet LoginServlet</title></head>");
    String uname = request.getParameter("txtId");
    String upass = request.getParameter("txtPass");
    if(uname.equals("admin") && upass.equals("servlet")){
    RequestDispatcher rd = request.getRequestDispatcher("WelcomeServlet");
    rd.forward(request, response);
    }
    else{
    out.println("<body bgcolor=red >");
    out.println("<h1> Login Fail !!! </h1>");
    RequestDispatcher rd = request.getRequestDispatcher("index.html");
    rd.include(request, response);
    }
    out.println("</body>");
    out.println("</html>");
    }
}
```

}

WelcomeServlet.java

```

package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.RequestDispatcher;
public class LoginServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head>");
    out.println("<title>Servlet LoginServlet</title></head>");
    String uname = request.getParameter("txtId");
    String upass = request.getParameter("txtPass");
    if(uname.equals("admin") && upass.equals("servlet")){
    RequestDispatcher rd = request.getRequestDispatcher("WelcomeServlet");
    rd.forward(request, response);
    }
    else{
    out.println("<body bgcolor=red >");
    out.println("<h1> Login Fail !!! </h1>");
    RequestDispatcher rd = request.getRequestDispatcher("index.html");
    rd.include(request, response);
    }
    out.println("</body>");
    out.println("</html>");
    } }

```

2b. Create a servlet that uses Cookies to store the number of times a user has visited servlet.

index.html

```
<html>
<head><title>Cookie Demo</title></head>
<body>
<form action="Page1" >
    Enter Your Name <input type="text" name="txtName"><br>
<input type="submit" value="~~~ Click to Enter ~~~">
</form>
</body>
</html>
```

Page1.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.Cookie;
public class Page1 extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head><title>Page1</title></head>");
    out.println("<body bgcolor=pink >");
    String uname = request.getParameter("txtName");
    out.println("<h1>~~~ Welcome "+uname+"</h1>");
    Cookie ck1 = new Cookie("username", uname);
    Cookie ck2 = new Cookie("visit", "1");
    response.addCookie(ck1); response.addCookie(ck2);
    out.println("<h1><a href=Page2 >Click to visit Page 2 </a></h1>");
    out.println("</body>");
    out.println("</html>");
    }
}
```

Page2.java

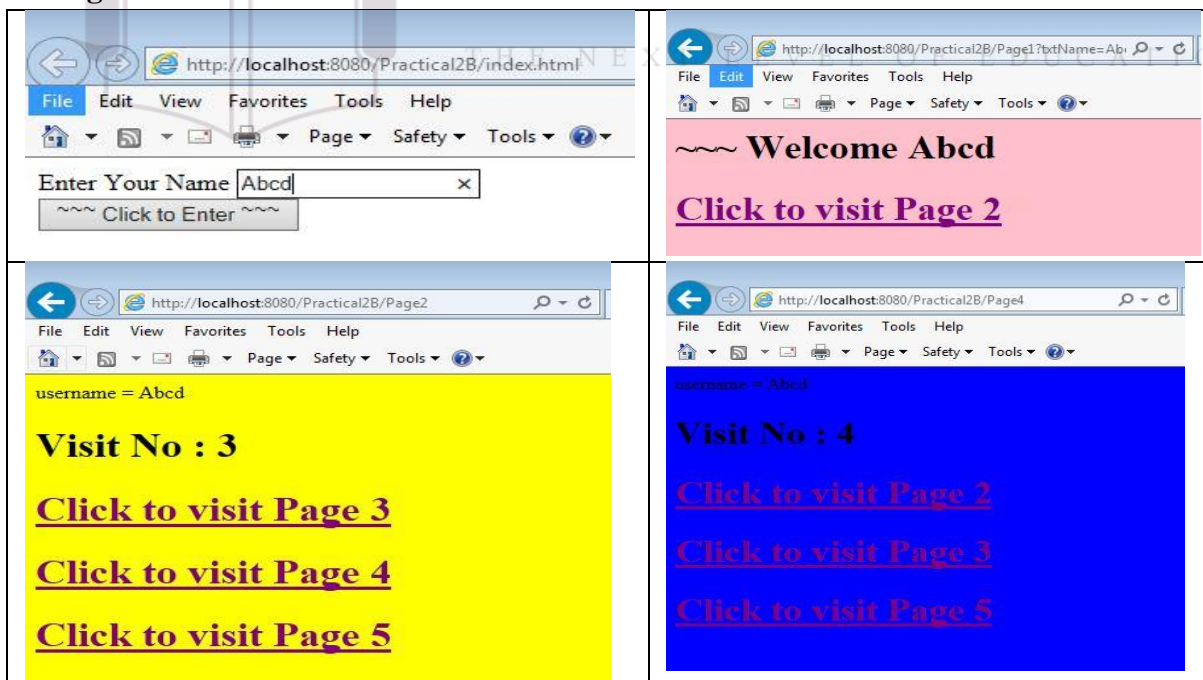

```
package mypack;
import java.io.*;
import javax.servlet.ServletException;
import javax.servlet.http.*;
public class Page2 extends HttpServlet {
```

```

public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head><title>Page2</title></head>");
    out.println("<body bgcolor=yellow >");
    Cookie [] ck = request.getCookies();
    for(int i=0;i<ck.length;i++){
    if(ck[i].getName().equals("visit")){
        int count = Integer.parseInt(ck[i].getValue())+1;
        out.println("<h1>Visit No : "+count+"</h1>");
        ck[i] = new Cookie("visit",count+"");
        response.addCookie(ck[i]);
    }
    else {
        out.println(ck[i].getName()+ " = "+ck[i].getValue());
    }
    out.println("<h1><a href=Page3 >Click to visit Page 3 </a></h1>");
    out.println("<h1><a href=Page4 >Click to visit Page 4 </a></h1>");
    out.println("<h1><a href=Page5 >Click to visit Page 5 </a></h1>");
    out.println("</body>");
    out.println("</html>");
    } }

```

Repeat the code from Page2.java for Page3.java, Page4.java and Page5.java with relevant changes.

Important Note: - Run this program on one machine as server and student's machine as client using proxy setting to demonstrate tracking of individual visitor's activity by server using cookie

2c. Create a servlet demonstrating the use of session creation and destruction. Also check whether the user has visited this page first time or has visited earlier also using sessions.

index.html

```
<html>
<head><title>Session Demo</title></head>
<form action="Page1" method="get" >
    Enter User ID <input type="text" name="txtName"><br>
<input type="reset" ><input type="submit" >
</form>
</html>
```

Page1.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;
public class Page1 extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head><title>Servlet Page1</title></head>");

    HttpSession hs = request.getSession(true);
    if(hs.isNew()){
        out.println("<body bgcolor=yellow>");
        String name = request.getParameter("txtName");
        hs.setAttribute("uname", name);
        hs.setAttribute("visit", "1");
        out.println("<h1>Welcome First Time</h1>");
    }
    else{
        out.println("<h1>Welcome Again</h1>");
        int visit = Integer.parseInt((String)hs.getAttribute("visit"))+1;
        out.println("<h1>You Visited "+visit+"Times</h1>");
        hs.setAttribute("visit", ""+visit);
    }
    out.println("<h1>Your Session ID "+hs.getId()+"</h1>");
    out.println("<h1>You Logged in at "+new java.util.Date(hs.getCreationTime())+"</h1>");
    out.println("<h1><a href=Page2>Click for Page 2 </a></h1>");
    out.println("<h1><a href=Page3>Click for Page 3 </a></h1>");
```

```

        out.println("<h1><a href=Page4>Click for Page 4 </a></h1>");
        out.println("<h1><a href=LogoutServlet>Click to Terminate Session </a></h1>");
        out.println("</body>");
        out.println("</html>");
    }
}

```

Page2.java

```

package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;
public class Page2 extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<html><head><title>Servlet Page2</title></head>");

        HttpSession hs = request.getSession(false);
        out.println("<h1>Welcome Again on Page No. 2</h1>");
        int visit = Integer.parseInt((String)hs.getAttribute("visit"))+1;
        out.println("<h1>You Visited "+visit+"Times</h1>");
        hs.setAttribute("visit", ""+visit);

        out.println("<h1>Your Session ID "+hs.getId()+"</h1>");
        out.println("<h1>You Logged in at "+new java.util.Date(hs.getCreationTime())+"</h1>");
        out.println("<h1><a href=Page1>Click for Page 1 </a></h1>");
        out.println("<h1><a href=Page3>Click for Page 3 </a></h1>");
        out.println("<h1><a href=Page4>Click for Page 4 </a></h1>");
        out.println("<h1><a href=LogoutServlet>Click for Terminate Session </a></h1>");
        out.println("</body>");
        out.println("</html>");
    }
}

```

Repeat the code from Page2.java in Page3.java and Page4.java with relevant changes.

LogoutServlet.java

```

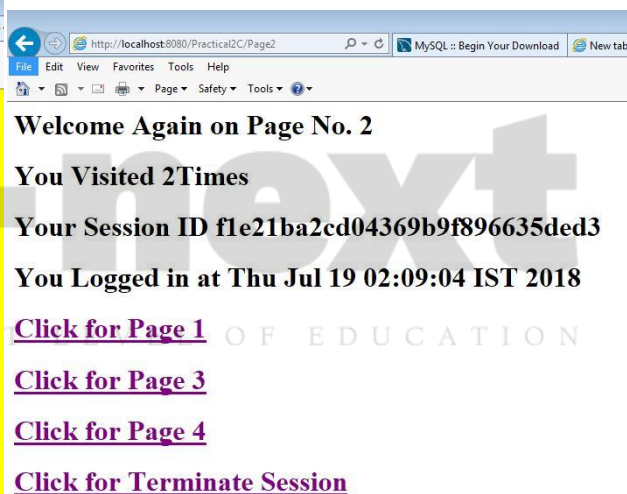

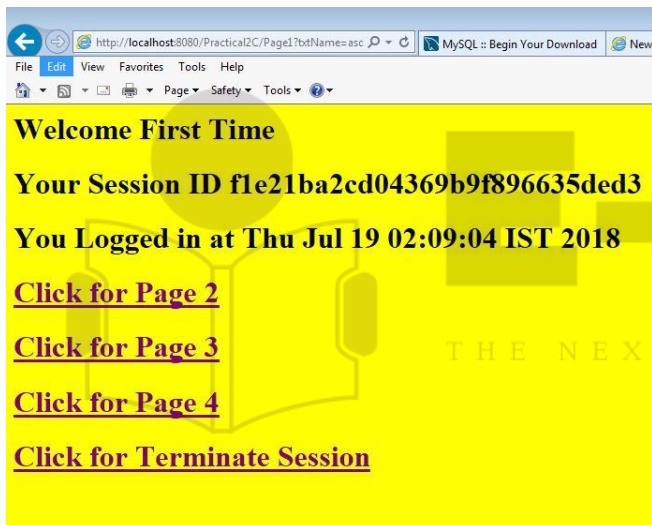

package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;

```

```

import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
public class LogoutServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<html><head><title>Servlet LogoutServlet</title></head>");
    out.println("<body>");
    javax.servlet.http.HttpSession hs = request.getSession();
    if(hs != null) hs.invalidate();
    out.println("<h1>You are Logged out now.....</h1>");
    out.println("</body>");
    out.println("</html>");
    }
}

```

You are Logged out now.....

Important Note: - Run this program on one machine as server and student's machine as client using proxy setting to demonstrate tracking of individual visitor's activity by server.

3a. Create a Servlet application to upload and download a file.

~~~~~ **index.html** ~~~~~

```
<html>
  <body>
    <form action="FileUploadServlet" method="post" enctype="multipart/form-data">
      Select File to Upload:<input type="file" name="file" id="file">
      Destination <input type="text" value="/tmp" name="destination">
      <br>
      <input type="submit" value="Upload file" name="upload" id="upload">
    </form>
  </body>
</html>
```

~~~~~ **FileUploadServlet.java** ~~~~~

```
package fileservletapp;

import java.io.*;
import javax.servlet.*;
import javax.servlet.annotation.MultipartConfig;
import javax.servlet.http.*;

@MultipartConfig
public class FileUploadServlet extends HttpServlet {
  public void doPost(HttpServletRequest req,HttpServletResponse res) throws ServletException,
  IOException
  {
    res.setContentType("text/html");
    PrintWriter out = res.getWriter();
    String path=req.getParameter("destination");
    Part filePart=req.getPart("file");
    String filename=filePart.getSubmittedFileName().toString();
    out.print("<br><br><hr> file name: "+filename);
    OutputStream os=null;
    InputStream is=null;
    try {
      os=new FileOutputStream(new File(path+File.separator+filename));
      is=filePart.getInputStream();
      int read=0;

      while ((read = is.read()) != -1) {
        os.write(read);
      }
      out.println("<br>file uploaded sucessfully...!!!");
    }
    catch(FileNotFoundException e){out.print(e);}
  } }
}
```

~~~~~ index.html ~~~~~

```
<html>
<head>
  <title>File Download Page</title>
</head>
<body>
  <h1>File Download Application</h1>
  Click <a href="DownloadServlet?filename=SampleChapter.pdf">Sample Chapter</a>
  <br/><br/>
  Click <a href="DownloadServlet?filename=TOC.pdf">Table Of Contents</a>
</body>
</html>
```

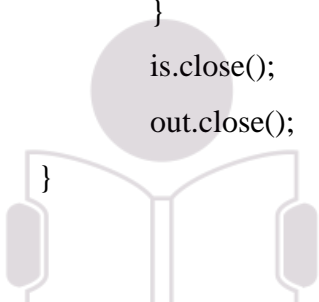

~~~~~ DownloadServlet.java ~~~~~

```
package filedownloadapp;

import java.io.IOException;
import java.io.InputStream;
import java.io.PrintWriter;
import javax.servlet.ServletContext;
import javax.servlet.ServletException;
import javax.servlet.ServletOutputStream;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
```

```
public class DownloadServlet extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse response)
```

```
throws ServletException, IOException {  
response.setContentType("APPLICATION/OCTET-STREAM");  
String filename = request.getParameter("filename");  
ServletContext context = getServletContext();  
    InputStream is = context.getResourceAsStream("/") + filename);  
//ServletOutputStream out = response.getOutputStream(); // any of the two works  
PrintWriter out=response.getWriter();  
response.setHeader("Content-Disposition","attachment; filename=\"\" + filename + "\""); //  
if comment this statement then it wl ask you about the editor with which you want to open the file  
  
    int i;  
  
    while ((i=is.read()) != -1) {  
        out.write(i);  
    }  
    is.close();  
    out.close();  
}  
}
```

THE NEXT LEVEL OF EDUCATION

3b. Develop Simple Servlet Question Answer Application using Database.

```

create database qadb;
use qadb;
create table quiz (qno varchar(5) PRIMARY KEY,question varchar(100), op1 varchar(50), op2
varchar(50), op3 varchar(50), op4 varchar(50), ans varchar(50))
insert into quiz values('001','What is the capital of India??','New
Delhi','Kolkata','Chennai','Mumbai','New Delhi');
insert into quiz values('002','Who was the First President of India??','Dr. Rajendra Prasad','Dr. S.
Radhakrishnan','Ram Nath Kovind','V. V. Giri','Dr. Rajendra Prasad');
insert into quiz values('003','What is ORM','Object Ratio Mean','Object Rotation Measure','Object
Relation Mapping','Oracle Request Management','Object Relation Mapping');
insert into quiz values('004','Unit of Energy is ___','Dozon','Kilo Meter ','Joul','Hertz','Joul')
insert into quiz values('005',' --- is the smallest memory unit.','bit','byte','Kilo Byte','Giga Byte','bit')

```

index.html

```

<html><head><title>Quiz Application</title></head>
<body>
<h1>Welcome to Quiz Servlet </h1>
<h1><a href="QuizServlet" >CLICK TO START QUIZ</a></h1>
</body>
</html>

```

QuizServlet.java

```

package mypack;

import java.io.*;
import java.sql.*;
import javax.servlet.*;
import javax.servlet.http.*;

public class QuizServlet extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<form action=ShowResult >");
        try {
            Class.forName("com.mysql.jdbc.Driver");
            Connection con =
                DriverManager.getConnection("jdbc:mysql://localhost:3306/qadb","root","root");
            Statement stmt = con.createStatement();
            ResultSet res = stmt.executeQuery("select * from quiz");
            out.println("<table border=1 >");
            int qno=0;
            while(res.next()){
                qno++;
            }
        }
    }
}

```

```

out.println("<tr><td>" + res.getString(1) + "</td>");
out.println("<td>" + res.getString(2) + "</td></tr>");
out.println("<tr><td><input type=radio name="+qno+"
value="+res.getString(3)+"></td><td>" + res.getString(3) + "</td></tr>");
out.println("<tr><td><input type=radio name="+qno+"
value="+res.getString(4)+"></td><td>" + res.getString(4) + "</td></tr>");
out.println("<tr><td><input type=radio name="+qno+"
value="+res.getString(5)+"></td><td>" + res.getString(5) + "</td></tr>");
out.println("<tr><td><input type=radio name="+qno+"
value="+res.getString(6)+"></td><td>" + res.getString(6) + "</td></tr>");
}
} catch (Exception e) { out.println(e); }
out.println("</table>");
out.println("<input type=reset >");
    out.println("<input type=submit value=SUBMIT >");
    out.println("</form>");    } }

```

----- ShowResult.java -----

```

package mypack;
import java.io.*;
import java.sql.*;
import javax.servlet.*;
import javax.servlet.http.*;
public class ShowResult extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    try {
        Class.forName("com.mysql.jdbc.Driver");
        Connection con = DriverManager.getConnection("jdbc:mysql://localhost:3306/qadb","root","root");
        Statement stmt = con.createStatement();
        ResultSet res = stmt.executeQuery("select ans from quiz");
        int count =0, qno=0;
        while(res.next()){
            if(res.getString(1).equals(request.getParameter(""+(++qno))))
            { count++;
            out.println("<h1>Correct </h1>");
            }
            else {
                out.println("<h1>Incorrect </h1>");
            }
        }
    }
    out.println("<h1>Your Score is "+count+" </h1>");
    } catch (Exception e) { out.println(e); } }

```

select * from quiz

Max. rows: 100

Fetched Rows: 5

Content Type text/html; charset=UTF-8
Locale en_US

Session Object

ID 39a6dd44e151027609e21c8b80c6
Creation Time Thu Jul 19 23:03:19 IST 2018
Last Access Time Thu Jul 19 23:09:20 IST 2018

4b. Develop a simple JSP application to pass values from one page to another with validations.
(Name-txt, age-txt, hobbies-checkbox, email-txt, gender-radio button).

index.html

```
<html><head><title>User Information Paage</title>
</head>
<body>
<form action="Validate.jsp">
    Enter Your Name<input type="text" name="name" ><br>
    Enter Your Age<input type="text" name="age" ><br>
    Select Hobbies
    <input type="checkbox" name="hob" value="Singing">Singing
    <input type="checkbox" name="hob" value="Reading">Reading Books
    <input type="checkbox" name="hob" value="Football">Playing Football<br>
    Enter E-mail<input type="text" name="email" ><br>
    Select Gender
    <input type="radio" name="gender" value="male">Male
    <input type="radio" name="gender" value="female">Female
    <input type="radio" name="gender" value="other">Other<br>
    <input type="hidden" name="error" value="">
    <input type="submit" value="Submit Form">
</form>
</body>
</html>
```

Validate.jsp

```
<% @page contentType="text/html" pageEncoding="UTF-8" import="mypack.*" %>
<html><head><title>JSP Page</title></head>
<body>
<h1>Validation Page</h1>

<jsp:useBean id="obj" scope="request"
    class="mypack.CheckerBean" >
<jsp:setProperty name="obj" property="*" />
</jsp:useBean>

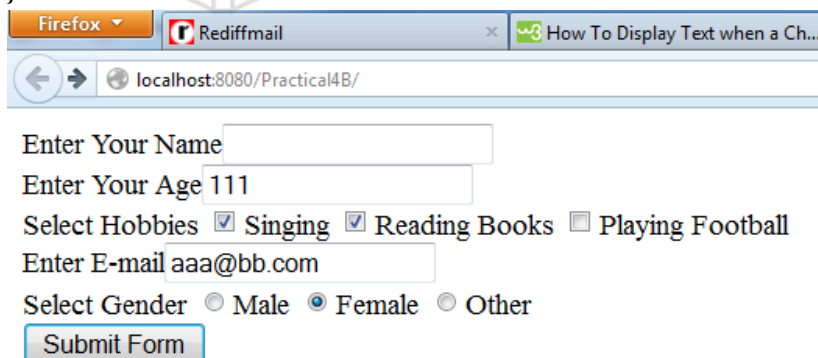

<% if (obj.validate())
{ %>
<jsp:forward page="successful.jsp"/>
<% }
else { %>
<jsp:include page="index.html"/>
<% } %>
<%=obj.getError() %>
</body></html>
```

-----CheckerBean.java-----

```
package mypack;
```

```
public class CheckerBean {
private String name, age, hob, email, gender, error;
public CheckerBean(){error="";}
public void setName(String n){name=n;}
public void setAge(String a){age=a;}
public void setHob(String h){hob=h;}
public void setEmail(String e){email=e;}
public void setGender(String g){gender=g;}
public void setError(String e){error=e;}
public String getName(){return name;}
public String getAge(){return age;}
public String getHob(){return hob;}
public String getEmail(){return email;}
public String getGender(){return gender;}
public String getError(){return error;}
public boolean validate(){
boolean res=true;
if(name.trim().equals("")) {error+="

4c. Create a registration and login JSP application to register and authenticate the user based on username and password using JDBC.

-----Register.html-----

```
<html><head><title>New User Registration Page</title></head>
<body>
<form action="Register.jsp" >
<h1> New User Registration Page</h1>
    Enter User Name <input type="text" name="txtName" ><br>
    Enter Password <input type="password" name="txtPass1" ><br>
    Re-Enter Password<input type="password" name="txtPass2" ><br>
    Enter Email<input type="text" name="txtEmail" ><br>
    Enter Country Name <input type="text" name="txtCon" ><br>
<input type="reset" ><input type="submit" value="REGISTER" >
</form>
</body>
</html>
```

-----Register.jsp-----

```
<% @page contentType="text/html" import="java.sql.*"%>
<html><body>
<h1>Registration JSP Page</h1>
<%
    String uname=request.getParameter("txtName");
    String pass1 = request.getParameter("txtPass1");
    String pass2 = request.getParameter("txtPass2");
    String email = request.getParameter("txtEmail");
    String ctry = request.getParameter("txtCon");
    if(pass1.equals(pass2)){
        try{
            Class.forName("com.mysql.jdbc.Driver");
            Connection con = DriverManager.getConnection("jdbc:mysql://localhost:3306/logindb");
            PreparedStatement stmt = con.prepareStatement("insert into user values (?, ?, ?, ?)");
            stmt.setString(1, uname); stmt.setString(2, pass1);
            stmt.setString(3, email); stmt.setString(4, ctry);
            int row = stmt.executeUpdate();
            if(row==1) { out.println("Registration Successful"); }
            else {
                out.println("Registration FFFFFAAAIILLLL !!!!");
                %><jsp:include page="Register.html" ></jsp:include>
            }
        } catch(Exception e){out.println(e);}
    }
    else
    {
        out.println("<h1>Password Mismatch</h1>");
    }
}
```

```

%>
<jsp:include page="Register.html" ></jsp:include>
<% }
%>
</body>
</html>

```

The figure displays four screenshots of a web application interface:

- Top Left:** A browser window showing a link titled "New User Register Here" and another link titled "Click Here to Login".
- Top Right:** A browser window showing the "Registration JSP Page" with the message "Registration Successful".
- Bottom Left:** A browser window showing the "New User Registration Page" with a form containing the following fields and values:
 - Enter User Name: admin123
 - Enter Password: [masked]
 - Re-Enter Password: [masked]
 - Enter Email: admin@gmail.com
 - Enter Country Name: India
 - Buttons: Reset, REGISTER
- Bottom Right:** A browser window showing the "Registration JSP Page" with the message "Password Mismatch". Below this is another "New User Registration Page" form with the same fields as the bottom-left screenshot.

**7b.** Develop simple visitor Statistics application using Message Driven Bean [Stateless Session Bean].

**7c.** Develop simple Marks Entry Application to demonstrate accessing Database using EJB.

<Any application to the best of Teachers assumption >

**8a.** Develop a simple Inventory Application Using JPA.

**8b.** Develop a Guestbook Application Using JPA.

JPA Practical using GuestBook

Steps:

1. Create Web Application with dedicated folder for Library

2. Add Simple java class or Persistent Entity class from Database (code below GuestBook.java)

3. Add SQL Connector Jar file to Library

4. Create Persistence Unit using jdbc connection to MySQL database

5. Create the JSP files (codes given below)

6. Run the Application.

GuestBook.java

~~~~~

```
package asif;
import javax.persistence.*;
```

```
@Entity
```

```
@Table(name="GuestBook")
```

```
public class GuestBook {
```

```
    @Id
```

```
    @GeneratedValue(strategy = GenerationType.IDENTITY)
```

```
    @Column(name="VisitorNo", unique=true, updatable=false)
```

```
    private Integer visitorNo;
```

```
    @Column(name="VisitorName")
```

```
    private String visitorName;
```

```
    @Column(name="Message")
```

```
    private String message;
```

```
    @Column(name="MessageDate")
```

```
    private String messageDate;
```

```
    public GuestBook() {
```

```
    }
```

```
    public Integer getVisitorNo() {
```

```
        return visitorNo;
```

```
    }
```

```
    public void setVisitorNo(Integer visitorNo) {
```

```
        this.visitorNo = visitorNo;
```

```
    }
```

```
    public String getVisitorName() {
```

```
        return visitorName;
```

```

    }
    public void setVisitorName(String visitorName) {
        this.visitorName = visitorName;
    }

    public String getMessage() {
        return message;
    }
    public void setMessage(String message) {
        this.message = message;
    }

    public String getMessageDate() {
        return messageDate;
    }
    public void setMessageDate(String messageDate) {
        this.messageDate = messageDate;
    }
}

```

</html>

```

8c. Create simple JPA application to store and retrieve Book details.<< **similar to above example** >>

9a. Develop a JPA Application to demonstrate use of ORM associations.

9b. Develop a Hibernate application to store Feedback of Website Visitor in MySQL Database.

```
create database feedbackdb;
create table GuestBook(
vno int PRIMARY KEY AUTO_INCREMENT,
vname varchar(50),
msg varchar(100),
mdate varchar(50)
)
```

----- GuestBookBean.java -----

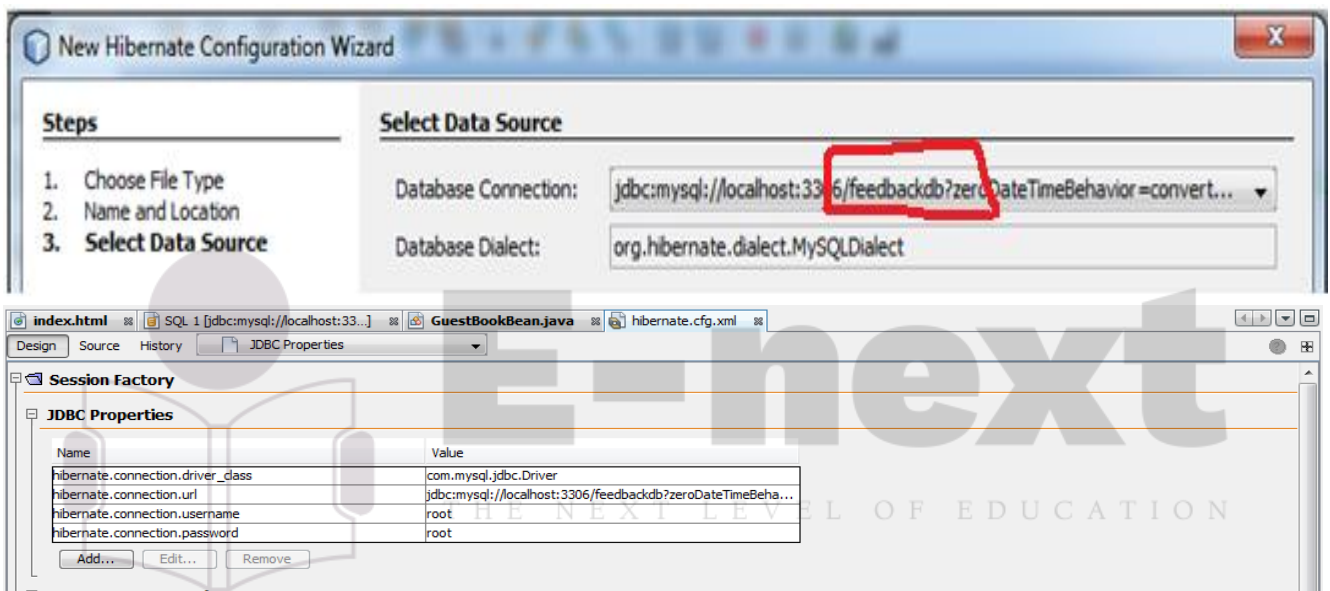

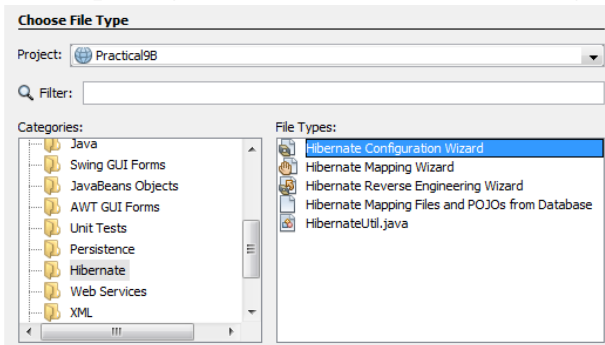

```
package mypack;
import javax.persistence.*;
@Entity
@Table(name="guestbook")
public class GuestBookBean implements java.io.Serializable {
    @Id
    @GeneratedValue
    @Column(name="vno")
    private Integer visitorNo;
    @Column(name="vname")
    private String visitorName;
    @Column(name="msg")
    private String msg;
    @Column(name="mdate")
    private String msgDate;
    public GuestBookBean() { }
    public Integer getVisitorNo() { return visitorNo; }
    public String getVisitorName() { return visitorName; }
    public String getMsg() { return msg; }
    public String getMsgDate() { return msgDate; }
    public void setVisitorNo(Integer vn) { visitorNo = vn ; }
```

```

public void setVisitorName(String vn) { visitorName = vn; }
public void setMsg(String m) { msg = m; }
public void setMsgDate(String md) { msgDate=md; }
}

```
